

## Live dashboard of data captured by a medical health information system

### The background:

A medical information software company approached CoGo Data to assist them to develop a user-friendly dashboard that display KPIs and metrics for one of their clients in the healthcare industry.

### The problem:

They were tasked to leverage the client's big data to provide their client with real-time and instantly accessible insights for them to provide better care, prevent diseases, and optimise their internal operations.

### The solution:

A user-friendly and interactive dashboard was developed using Looker, a BI tool hosted on the Google Cloud Platform.

### The result:

The healthcare provider obtained access to real-time and instantly available insights to provide better care.
